In either case, the contractor shall remove such trees at the direction of the engineer at no additional cost to the County.

20. **FIELD CONDITION ALLOWANCE:** The field condition allowance shown on the bid sheet shall belong to Chatham County. The purpose of this Allowance is to allow the County to designate actions associated with completion of the project which are not indicated on the plans, but which are dictated by field conditions. Bidders shall not use this Allowance to assume any Contractor costs known or unknown at the bidding. Chatham County must approve use of the Allowance. All bidders shall include this Field Condition Allowance within their base bid. Any unused allowance shall revert to Chatham County.

21. **SAMPLING AND TESTING OF MATERIALS:**

All sampling and testing services shall be performed by an independent testing agency which operates in accordance to ASTM D3470 and E329, latest edition, and accepted by the County Engineer, at the contractor's expense. All sampling testing required for the project will be in accordance with the GDOT Sampling, Testing and Inspection Guidelines. It is understood that these are the minimum testing requirements and that additional testing may be requested by the

Engineer, as needed. A minimum **of 24 hours notice shall be given to the County Project Manager** prior to work being completed which requires testing. A copy of all test reports shall be sent to the Project Manager. The cost associated with testing shall be included in the bid price for that item.

### Section-687 Traffic Signal Timing

*Add the following:*

---

#### 687.1 General Description

This work consists of developing and implementing, by a prequalified Contractor, a traffic signal operating plan designed to provide a safe and efficient operation of the Intersection of President Street and Wahlstrom Road. This work includes system timing plan development, implementation and adjustment.

##### 687.1.01 Definitions

Use the following definitions for purposes of this project:

- A prequalified Contractor is defined as one who is qualified to perform work in Area Class Codes 3.06 and 3.09 in the Georgia Department of Transportation's Consultant Prequalification regulations.
- A signal timing plan is defined as a unique combination of cycle length, splits and offsets for all intersections within a system or control section.
- A control section is defined as any portion of a traffic control system, which can be controlled by a single set of timing parameters and in which all intersections change timing patterns at the same time.
- Engineer is defined as the County Engineer.
- Approved or approval is defined as written approval by the County Engineer or his designated representative.

##### 687.1.03 Submittals

Make the following three (3) submittals to the Engineer for review and approval in the sequence and order listed. Each submittal must be approved before conducting any associated work. The preliminary timing plan shall be submitted a minimum of 30 calendar days prior to the proposed signal activation date.

1. Methodology Report
2. Preliminary timing plans
3. Final Timing Plans Report

Submit all traffic signal timing data to the Engineer in a form utilizing the manufacturer's software. Assure that all work submitted is neat and legible.

#### 687.2 Materials

##### 687.2.01 Software

The Department will not provide resources to fulfill any Contractor obligations under this Special Provision. The Department will not furnish any software or equipment for the development and implementation of timing plans. Obtain all necessary licensed software, equipment and materials to support this work effort. All software used for this project must be registered to the Contractor and must be 100 percent compatible with the software utilized by the Department. Supply proof of registration.

#### 687.3 Construction Requirements

## **Section 687- Traffic Signal Timing**

---

### **687.3.01 Field Review**

Visit the intersection during the morning, afternoon and evening peak traffic periods in order to make qualitative assessments of intersection operation. Make note of queue length, delays, conflicts or any other operational characteristics that should be considered in evaluating and developing coordinated traffic signal timing plans. Make note of the surrounding land use and traffic generators to gain insight on the daily traffic patterns of motorists in the area.

Upon completion of the field observations, contact the Engineer to determine if any special local conditions exist that could affect the timing plan development process.

### **687.3.02 Methodology Report**

Develop a traffic signal Methodology Report containing the following data:

1. Methodology for calculating pedestrian and vehicular clearance intervals
2. Signal analysis software to be used
3. Software registration numbers
4. Time Schedule for the signal timing development and implementation

Submit two (2) copies of the Methodology Report to the Engineer for review and approval. Obtain written approval of the Methodology Report prior to the development of initial system timing plans. Define in the Methodology Report the intended methodology for developing system timing as well as the goals for operating the system.

Submit for approval a time schedule for completing the tasks covered under this Special Provision.

Define all software programs proposed to be used for timing plan development and database preparation. Do not use the Department resources to fulfill any of the Contractor's obligations under this Special Provision.

Use a Georgia Department of Transportation approved computer signal timing analysis program to develop the signal timing plans. All software programs must be 100 percent compatible with the programs that the Department is currently using. Program version numbers may be different as long as the data can be saved into the version utilized by the Department. Obtain approval from the Engineer of all computer programs to be used for this project. Provide program registration numbers.

### **687.3.03 Data Collection**

The traffic study including the traffic counts will be made available to the contractor by the County.

### **687.3.08 Initial Timing Plan Development**

After receiving written approval of the Methodology Report from the Engineer, develop initial system timing plans based on the Methodology Report. Include in each timing plan controller, master (if present) and system settings necessary to allow coordinated operation of the Intersections.

#### **687.3.08.01 Timing Plan Development Requirements**

Submit a report consisting of the recommended time-of-day, day-of-week time periods for each plan and the proposed signal timing plans and databases for each plan to the Engineer for review and approval.

Develop and submit for approval by the Engineer procedures and a schedule for implementing and fine-tuning the timing.

Submit the signal timing development computer program input and output files for the proposed signal timing plans. Explain in the initial timing plan report the analysis and conclusions regarding the development of the signal timing plans.

### **687.3.09 Timing Plan Implementation**

Upon receipt of written approval of the Initial Timing Plan Report by the Engineer, implement the new signal timing. Notify the Engineer five (5) working days in advance of the implementation of the system timing plan. Do not schedule implementation on peak traffic days or peak travel times without prior approval from the Engineer.

Enter only approved data into the equipment at each location. Enter the new timing data at each controller, through the master or from the workstation. If entering the timing data from the workstation, have a person experienced with controller operation on-

## **Section 687- Traffic Signal Timing**

site in the field during the implementation process. Obtain approval of the method of data entry from the Engineer prior to the entry of any data. Develop and implement all settings required for the system database.

### **687.3.10 Fine-Tuning**

Review the timing plans and adjust this data as required by actual field conditions or as directed by the Engineer. Conduct this evaluation in three (3) stages:

1. Conduct an initial field verification within twenty-four (24) hours of operating plan implementation. Review the operation of the equipment in the field to verify that the correct cycle lengths, splits and offsets are being implemented by the system and that no major operating problems occur.
2. In the second stage, include a detailed on-street review of the operation of all timing plans. This review will determine where adjustments are required subject to excessive queues or vehicle delays. Upon determining these locations, make the necessary adjustments.
3. The third stage of the fine-tuning consists of an on-street review of the timing plans by the Contractor, the Department and the Local Agency, if applicable. Request in writing to proceed with this stage and submit documentation of the activities in completing stages one and two before beginning the third stage. It is not the intent of stage three for the Department and the Local Agency to accomplish stages one and two for the Contractor. Stage three is reserved for the Department and Local Agency to review and approve, reject or request changes to the final timings as installed by the Contractor. As directed by the Department, the third stage could involve rejection of the timing plans, at which point the Contractor must repeat stages one and two and then request a follow-up stage three review with the Department. As directed by the Department, the third stage could also require the Contractor to re-run the timing plan development program at lower or higher restricted ranges or at specific cycle lengths (as needed to achieve the desired progression and minimize delay). If so directed, implement the necessary adjustments and repeat the detailed on-street review. Notify the Department at least five working days in advance of all on-street reviews. The Department reserves the right to require that adjustments be made due to conditions observed in the field.

Make any adjustments to the timings requested by the Department until the Final Timing Plan Report is submitted for review. Anticipate implementing all plans into the system and fine tuning all plans during the time-of-day/day-of-week, (and season of year, if applicable) that the plans are scheduled to be in effect. Shall present to the Department for approval any contract scheduling conflicts that may interfere with the proper scheduling of the timing plan implementation along with proposed resolutions.

Complete the fine tuning prior to the beginning of the operational test period as specified in Section 647.3.06.C of the Traffic Signal Installation Supplemental Specification.

### **687.3.12 Final Timing Plans**

After all necessary adjustments are made to the timing and operating data and system graphics, furnish two (2) signed copies in a notebook of the final local timing plans to the County Engineer. Provide hard copies of the local and timing on the signal system software manufacturer's forms. Use the back-up routine provided in the Department's signal system software to make a back-up of the system database. Supply this back-up to the Engineer on a 3.5" diskette or a CD-ROM.

## **687.4 Measurement**

Work performed under this specification will not be measured separately for payment.

## **687.5 Payment**

Work performed under this specification will be paid for as part of the Lump Sum price bid under item 647-1000 Traffic Signal Installation 1 and will include all materials, labor, tools, equipment, supplies, and incidentals to complete this work.

## **SPECIAL PROVISION**

### **PROMPT PAYMENT**

Prime Contractors, who sublet a portion of their work, shall pay their subcontractors for satisfactory performance of their contracts no later than 10 calendar days from receipt of each payment made to them.

Any delay or postponement of payment among the parties may take place only for good cause with prior written approval from the County.

If the Contractor is found to be in noncompliance with these provisions, it shall constitute a breach of contract and further payments for any work performed may be withheld until corrective action is taken. If corrective action is not taken, it may result in termination of the contract.

All subcontract agreements shall contain this requirement.
